| 02 | Business Problem & Opportunity

Fragmented data. Manual reporting. Limited insights.
Leaders lack real-time visibility to make confident portfolio decisions.

BUSINESS PROBLEM

IT services organizations operate multiple clients and projects, yet portfolio information is **fragmented across spreadsheets**, disparate tools and siloed reports.

Leaders spend **excessive time consolidating data, validating numbers and preparing reports** instead of analyzing performance and driving strategic decisions.

The lack of real-time, trusted insights results in **delayed decisions, margin leakage, capacity conflicts and missed opportunities**.

KEY PAIN POINTS OBSERVED

Fragmented & Disconnected Data

Portfolio data exists in multiple systems and spreadsheets, leading to inconsistencies and version conflicts.

Time-Consuming Manual Processes

Leaders and managers spend significant time consolidating data and preparing reports, reducing time for analysis.

Limited Real-Time Visibility

Lack of real-time dashboards and drill-downs results in delayed visibility into revenue, margin, utilization and risks.

Difficulty in Performance Analysis

Inability to quickly analyze client, project and service line performance trends and identify problem areas.

Risk of Margin Erosion & Resource Conflicts

Lack of early alerts on low margin projects, over/under-utilization and capacity conflicts leads to margin leakage.

Limited Decision Support

Leaders lack an AI-assisted partner to interpret data, answer business questions and support confident decision making.

THE OPPORTUNITY

There is a significant opportunity to build an **AI-powered portfolio intelligence platform** that unifies data, **automates reporting** and delivers real-time, trustworthy insights.

Unified Portfolio Visibility

Single source of truth for all portfolio KPIs and performance metrics.

Faster & Smarter Decisions

Real-time insights and AI-assisted answers enable confident decision making.

Improved Profitability

Early identification of risks, margin leaks and optimization opportunities.

Higher Productivity

Automated reporting and natural language interaction save time and effort.

PortIQ addresses these challenges by combining unified portfolio data, AI-powered insights and intuitive dashboards to empower leaders with clarity, speed and confidence.

Opportunity:

High impact across delivery, finance and leadership.

Product Vision, Target Users & Value Proposition

PortIQ empowers leaders with AI-powered portfolio intelligence for real-time, data-driven decisions that drive performance and profitability.

PRODUCT VISION

To be the **single source of truth** for portfolio performance, enabling services organizations to **anticipate risks**, **optimize resources** and **accelerate growth** through AI-powered insights.

TARGET USERS

Executives & Business Leaders

Need portfolio-level visibility to make strategic decisions and drive growth.

Portfolio Managers

Need real-time insights to monitor performance, risks and pipeline health.

Delivery & Project Managers

Need project-level visibility to track progress, utilization, cost and profitability.

Finance Leaders

Need accurate financials, margin analysis and revenue forecasting.

Sales & Account Managers

Need insights on account performance, opportunities and client health.

VALUE PROPOSITION

PortIQ **unifies fragmented data**, **automates reporting** and leverages AI to deliver **real-time, trusted insights**—enabling leaders to make **faster, smarter** and more **confident portfolio decisions**.

CORE BENEFITS

Unified Portfolio Visibility

Single source of truth for all portfolio KPIs and performance metrics.

Real-Time Insights

Up-to-date dashboards and drill-downs for instant visibility into performance and risks.

AI-Powered Intelligence

Natural language interface and AI insights to simplify analysis and decision making.

Better Decision Making

Trusted, actionable insights enable confident and data-driven decisions.

Operational Efficiency

Automated reporting and self-service analytics save time and reduce manual effort.

Improved Performance

Early risk detection, margin optimization and resource alignment drive better outcomes.

JOBS-TO-BE-DONE

I need a unified view of my portfolio so that I can understand overall performance at a glance.

I need real-time insights and alerts so that I can act quickly on risks and opportunities.

I need to analyze performance by client, project and service line so that I can identify what is driving profitability.

I need to know the health of my projects so that I can ensure on-time delivery and margin protection.

I need AI assistance to answer my business questions so that I can make faster and more confident decisions.

I need accurate data and automated reporting so that I can save time and focus on strategic work.

PortIQ brings together **people, process, data and AI** to deliver real-time portfolio intelligence, helping organizations drive **growth, improve profitability** and create lasting value.

Intelligent insights

Product Features & MVP Scope

PortIQ delivers an integrated suite of AI-powered capabilities to provide end-to-end portfolio visibility, performance intelligence and decision support.

CORE PRODUCT CAPABILITIES

Executive Dashboard

Real-time portfolio overview with KPIs on revenue, gross margin, utilization, project health and risks.

Portfolio Intelligence

Analyze portfolio performance by client, project, service line, geography and time.

Client Insights

360° view of clients with revenue contribution, project pipeline, profitability and health.

Project Performance

Track project status, financials, margins, utilization, risks and milestones.

Reports & Analytics

Pre-built reports and custom analytics for deeper drill-down and trend analysis.

AI Copilot

Natural language interface to answer business questions, generate insights and summaries.

MVP SCOPE – WHAT'S INCLUDED

1

Dashboard

Single-pane view of key portfolio KPIs and trends.

2

Portfolio

Performance analysis by client, project, service line, geography and time.

3

Clients

Client 360° view with revenue, profitability and engagement insights.

4

Projects

Project tracking with status, financials, utilization, risks and milestones.

5

Reports

Standard dashboards and reports with export and drill-down capabilities.

6

Copilot

AI assistant for Q&A, insights, explanations and natural language reports.

OUT OF MVP (FUTURE RELEASES)

Predictive Analytics

Forecast revenue, margin, utilization and project outcomes.

AI Risk & Anomaly Detection

Proactive risk identification and anomaly detection across portfolio.

Scenario Planning

What-if analysis for pipeline, capacity and financial scenarios.

Workflow Automation

Automated alerts, approvals and actions based on insights.

System Integrations

Connect with ERP, PSA, CRM and other enterprise systems.

Mobile App

Role-based mobile access for dashboards and alerts.

MVP VALUE

The MVP focuses on delivering immediate visibility and actionable insights to help leaders make faster, data-driven decisions and improve portfolio performance.

Quick Time to Value

Focus on high-impact use cases for early benefits.

Simplicity First

Streamlined features for ease of adoption.

Scalable Foundation

Built to scale with future capabilities.

User-Centric Design

Intuitive experience tailored to user needs.

MVP GOAL: Provide unified visibility, real-time insights and AI-assisted decision support to drive better performance and profitable growth.

MVP Architecture

A cloud-native, modular architecture delivering portfolio intelligence with synthetic data and AI-assisted natural language insights.

ARCHITECTURE OVERVIEW

The MVP is built as a modern web application with a modular, **cloud-native** architecture.

It integrates a **calculation engine** for portfolio metrics and an **AI orchestration** layer for natural language insights.

The system ensures secure data handling, role-based access and **evidence-grounded AI responses**.

KEY DESIGN PRINCIPLES

Security by Design

Role-based access, secure APIs and tenant isolation

Modular & Scalable

Loose coupling enables independent scaling of components

Cloud-Native

Built on serverless and managed services for agility and reliability

AI-Augmented

Natural language interface with evidence-grounded answers

Insights-Driven

Real-time KPIs, trends and drill-down analytics for confident decisions

PORTIQ MVP ARCHITECTURE

END-TO-END FLOW

WHAT IS IMPLEMENTED IN MVP

- ✓ Complete front-end application (React + TypeScript)
- ✓ All six core modules with dashboards and reports
- ✓ Calculation engine with synthetic datasets
- ✓ AI Copilot (Claude integration design via secure API)
- ✓ Role-based access and secure data handling
- ✓ Deployed on Vercel (Frontend + Serverless Functions)

SCOPE OF MVP

The MVP is a single-tenant solution using synthetic data only. It is designed to validate the core product, user experience and AI capabilities before enterprise-scale rollout.

MVP OBJECTIVE

Validate value, usability and AI impact through rapid iteration and user feedback.

06 Technology Stack & AI Workflow

Modern web stack with client-side computation and serverless backend.
Evidence-grounded AI assistance (prototype mode) for natural language insights.

TECHNOLOGY STACK (IMPLEMENTED)

React

Component-based UI library for building modular and interactive user interfaces.

Vite

Fast build tool and dev server for a seamless development experience.

Tailwind CSS

Utility-first CSS framework for rapid and responsive UI design.

TypeScript

Type-safe JavaScript for robust code and better developer productivity.

Vercel Serverless Functions

Serverless backend for API endpoints and business logic.

Synthetic Dataset

Curated JSON/TypeScript datasets for Portfolio, Clients, Projects, Financials, Reports and Users.

Calculation Engine (Client-side)

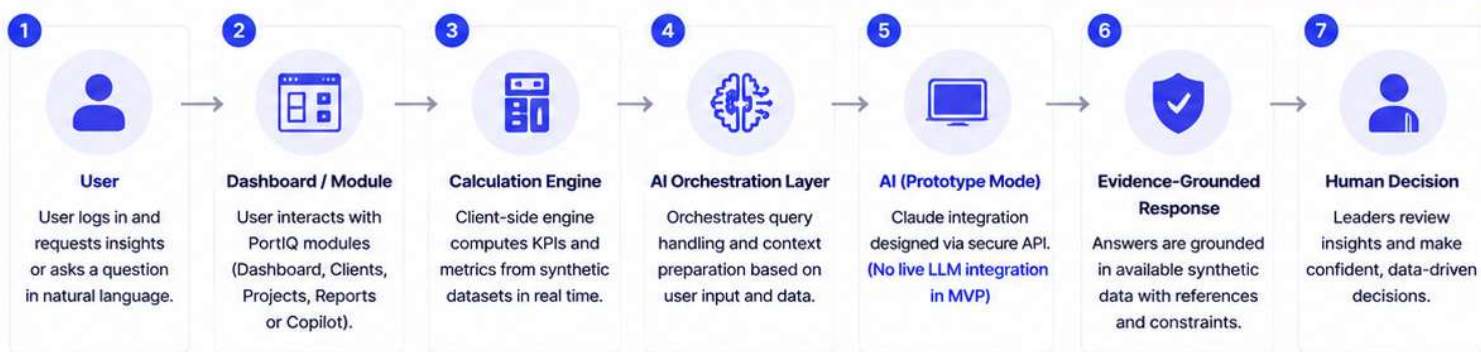

Built-in metric and KPI computation engine for real-time insights.

Claude Integration (Design)

AI/LLM integration designed via secure API. (Prototype mode – no live LLM integration)

AI ASSISTED INSIGHT WORKFLOW (PROTOTYPE MODE)

KEY IMPLEMENTATION HIGHLIGHTS

- ✓ Full front-end application with six core modules (Dashboard, Portfolio, Clients, Projects, Reports, Copilot).
- ✓ Client-side calculation engine for KPI computation (Revenue, Margin, Utilization, Risks, etc.) with synthetic datasets.
- ✓ Serverless backend on Vercel for API endpoints and secure data handling.
- ✓ AI Copilot UI with Claude integration design (secure API) – in prototype mode.
- ✓ Role-based access and secure practices implemented.
- ✓ Responsive, modern UI with fast performance and excellent UX.

WHAT IS OUT OF MVP SCOPE

- ✗ Live LLM integration and real-time AI inference.
- ✗ Real-time data ingestion from enterprise systems.
- ✗ Advanced analytics, ML models and forecasting.
- ✗ Multi-tenant enterprise deployment.
- ✗ Advanced personalization and recommendation engine.
- ✗ Mobile application (to be addressed in future releases).

MVP APPROACH

Focus on core value – unified visibility, KPI computation and AI-assisted insights using synthetic data.

DESIGN PRINCIPLE

Evidence-grounded answers, secure by design, modular and built for scale.

MVP GOAL

Validate value, usability and AI impact through rapid iteration and user feedback before enterprise-scale rollout.

PortIQ Prototype Demonstration

An interactive MVP showcasing six core modules with synthetic data and AI Copilot (prototype mode).
Built for portfolio intelligence, real-time insights and data-driven decisions.

1

Dashboard

Real-time overview of key KPIs, trends, alerts and portfolio health in a single view.

2

Portfolio Analysis

Analyze performance by client, project, service line, geography and time.

3

Clients

360° view of client performance, revenue contribution, profitability and engagement.

4

Projects

Track project pipeline, status, financials, utilization, risks and milestones.

5

Reports

Pre-built and custom reports for deeper drill-down and trend analysis.

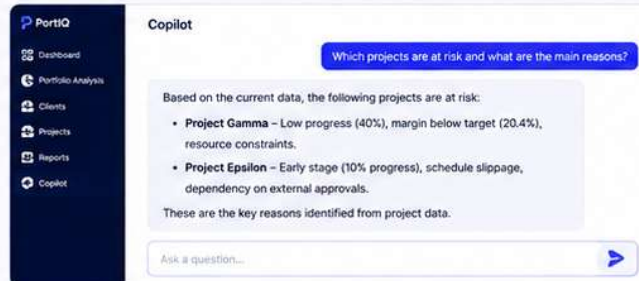

6

Copilot (AI Assistant)

Ask questions in natural language and get evidence-grounded answers (prototype mode).

WHAT THIS PROTOTYPE SHOWS

- ✓ Six fully functional modules with synthetic data
- ✓ Client-side calculation engine for real-time insights
- ✓ AI Copilot in prototype mode with secure API design

KEY TAKEAWAYS

- ✓ Unified visibility across portfolio, clients, projects and performance
- ✓ Faster insights, better decisions, improved portfolio health
- ✓ Scalable foundation for enterprise-grade AI-powered intelligence

NEXT STEP

Pilot with real enterprise data, integrate live LLM services, enhance analytics and scale across the organization.

Business Impact, Expected Results & PortIQ Advantage

PortIQ is a full-fledged AI-powered portfolio intelligence platform that transforms data into insight, enables confident decisions and drives sustainable business impact.

EXPECTED BUSINESS RESULTS

Unified Portfolio Visibility

Single source of truth across portfolio, clients, projects, resources and financials.

Faster, Better Decisions

Real-time KPI computation and AI-assisted insights enable proactive, data-driven decision-making.

Improved Portfolio Health

Early identification of risks, low-margin projects and under-utilized resources to protect profitability.

Higher Operational Efficiency

Automation of reporting and analysis reduces manual effort and accelerates insight generation.

Stronger Financial Impact

Focus on high-value clients and projects drives better margins, revenue growth and resource productivity.

Future-Ready & Scalable

Modular, cloud-native platform ready to scale with enterprise needs and evolving AI capabilities.

BUSINESS VALUE DELIVERED

Strategic Alignment

- Align portfolio execution with business goals
- Prioritize the right clients, projects and investments

Performance Optimization

- Monitor KPIs, trends and margins in real time
- Optimize utilization and resource allocation

Risk Mitigation

- Detect project and financial risks earlier
- Improve delivery predictability and outcomes

Client & Stakeholder Trust

- Transparent performance reporting
- Data-backed insights drive confidence and credibility

Revenue & Margin Growth

- Identify high-impact opportunities
- Improve margins and increase portfolio value

Operational Excellence

- Standardized processes and metrics
- Reduced manual effort and faster time to insight

PORTIQ ADVANTAGE

AI-First by Design

Conversational interface with natural language portfolio insights, evidence-grounded answers and intelligent recommendations.

Client-Side Calculation Engine

Real-time KPI computation for revenue, margin, utilization, risk and more using unified data and business rules.

Unified Data & Intelligence Layer

Consolidates portfolio, client, project, resource and financial data from multiple systems into a single intelligence layer.

Trusted, Secure & Compliant

Role-based access, row-level security, audit trails and compliance with enterprise data governance standards.

Modular & Extensible

End-to-end platform with six core modules and APIs to integrate with ERP, PPM, CRM and other enterprise tools.

Cloud-Native & Scalable

Built on modern, scalable cloud architecture to support multi-tenant deployments and global enterprise scale.

Business Outcome

PortIQ empowers portfolio leaders to see clearly, act early and drive sustainable business impact across the entire organization.

Better Decisions

Higher Margins

Lower Risk

Stronger Growth

PortIQ does not replace existing systems – it complements them with an AI-powered intelligence layer that drives smarter, faster and more confident portfolio decisions.

Thank You!

Turning Portfolio Data into Confident Decisions.

PortIQ is an AI-powered portfolio intelligence layer that unifies data, computes KPIs in real time and delivers evidence-grounded insights so leaders can act early and drive sustainable impact.

Key Takeaways

Unified Visibility

Single source of truth across portfolio, clients and projects.

AI-Powered Insights

Natural language insights with evidence-grounded answers.

Real-time KPI Computation

Client-side engine for accurate, real-time metrics.

Trusted & Secure

Built on secure APIs, serverless functions and role-based access.

Scalable Foundation

Modular, cloud-native architecture ready for enterprise scale.

PortIQ empowers portfolio leaders to see clearly, act early and drive sustainable business impact.

Thank you for your time.
